Materials, including 20 families, were collected in Altaisky krai and Altai republic between 1998-2004 years. Two species, *Latrodectus tredecimguttatus* (P. Rossi, 1790) and *Alopecosa turanica* Saveljeva, 1972 were found in the region for the first time. The majority of materials were collected on the Korgon, Tigirek and Bashchelak ridges. In addition, materials were collected from south-western and northern parts of Altaisky krai and from northern Altai republic.
